WALMART STORE SALES PERFORMANCE DASHBOARD 2010 – 2012

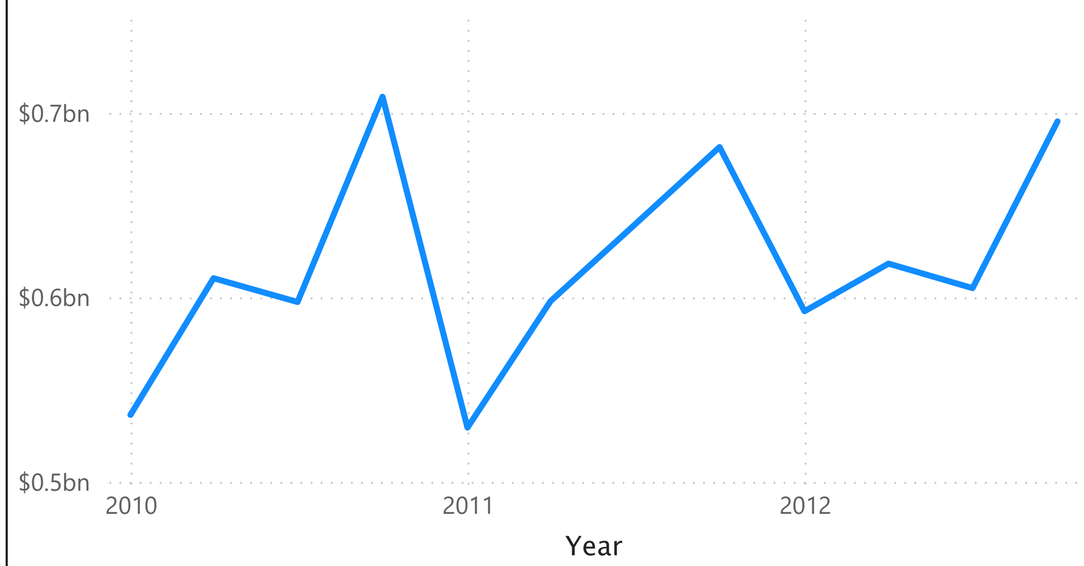
Total Sales	Average Weekly Sales	Average Holiday Lift Ratio	Peak Month	# of Stores	Top Store
$6.74bn	$1.05M	1.07x	December	45	Store # 20

Data covers 45 Walmart stores across 3 years. Jan 2010 and Nov–Dec 2012 are seasonally estimated. Holiday lift measured as Holiday vs Normal week average.

Year and Month

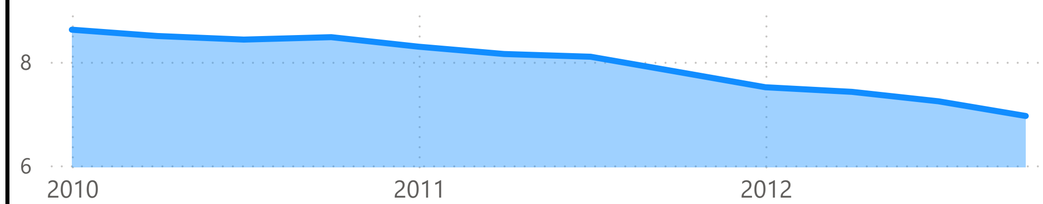
- 2010
- 2011
- 2012

Sales Trend 2010 –2012



Average Unemployment Trend

Correlation to weekly sales: −0.11 | Unemployment declining as economy recovered

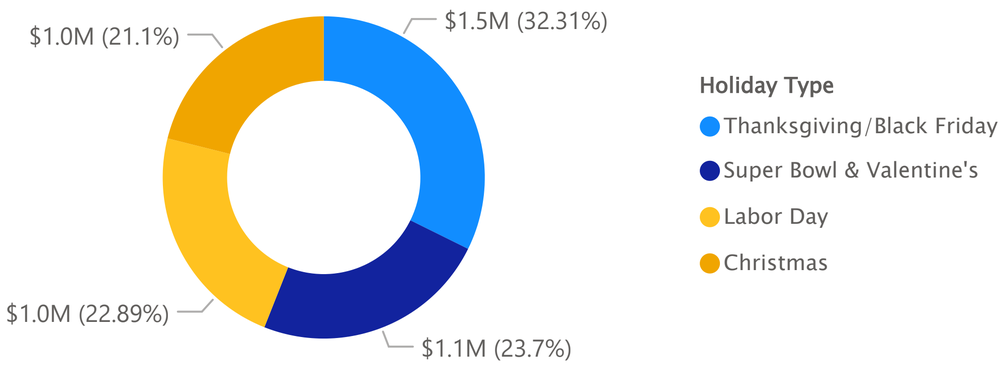


Store Performance

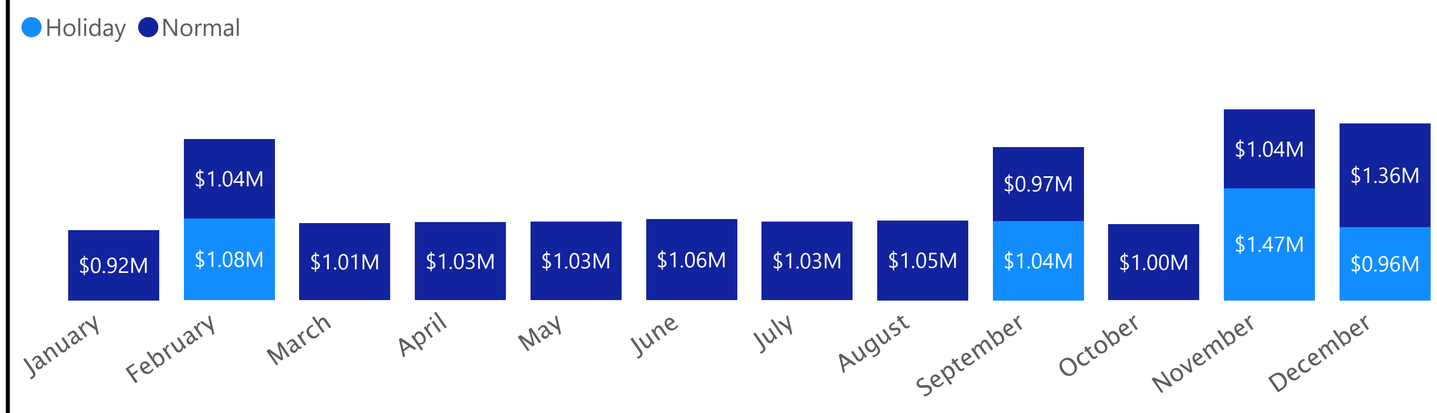
Green = Star stores | Red = Problem stores | Amber = Anomalies

Overall Tier	Holiday Driven	Holiday Neutral	Holiday Resistant
High Performer	2	10	
Normal	7	15	
Underperformer	3	4	4

Average Sales Distribution by Holiday Type



Average Weekly Sales by Week Type



STORE PERFORMANCE DEEP DIVE 2010 – 2012

Star Stores

High Performer + Holiday Driven

Store 10
$271.6M
Rank #6 – Lift: 1.12x

Store 19
$206.6M
Rank #11 – Lift: 1.10x

Both stores consistently above baseline in total sales and show strong holiday responsiveness. These are the benchmark stores.

Insight Stores

Underperformer + Holiday Driven

Store 29
$77.1M
#36 – 1.14x

Store 16
$74.3M
#37 – 1.10x

Store 5
$45.5M
#43 – 1.14x

Below baseline in total sales but respond strongly to holiday weeks. Holiday traffic is masking underlying weakness. Strip out seasonal weeks and these stores underperform significantly.

Priority Stores

Underperformer + Holiday Resistant

Store 37
$74.2M
#38 – 0.98x

Store 38
$55.2M
#41 – 0.99x

Store 36
$53.4M
#42 – 0.98x

Store 44
$43.3M
#44 – 0.98x

Bottom-ranked in total sales and holidays sales lift. Dual weakness: neither baseline nor seasonal strategy is working.

Strategic Recommendations for Leadership

Replicate the star store model

Stores 10 and 19 outperform on both baseline sales and holiday responsiveness. Conduct operational deep-dives: staffing ratios, inventory management, promotional execution. Next, document and implement replicable practices: these stores should serve as internal benchmarks for training and expansion planning.

Intervene on priority stores urgently

Stores 36, 37, 38, 44 show a dual failure: weak baseline sales and no holiday uplift. Holiday promotions are either not reaching customers or not resonating. Recommend localized market analysis, competitive mapping, and targeted promotional strategy review. If performance does not improve within 2 cycles, consider format conversion or closure assessment.

Investigate the seasonally-dependent stores

Stores 5, 16, and 29 are holiday-rescued: seasonal weeks mask weak baseline performance, likely driven by low everyday foot traffic rather than execution issues. Test whether holiday tactics can extend into normal weeks to build routine visits. If the baseline gap persists after two cycles, the issue is structural and format reconsideration is warranted.

Leverage macro tailwinds proactively

Walmart's sales recovered in line with the broader economy - as unemployment fell from 9% to 7%, weekly sales grew 2.6%. This suggests the store network benefits more from employment recovery than from trade-down behavior. Leadership should prioritize markets where employment is recovering fastest and ensure inventory and staffing are positioned to capture increasing consumer spending rather than defensively protecting against economic stress.

WALMART SALES OUTLOOK 2010 – 2015 (Actual + Forecast)

2015 Projected Revenue

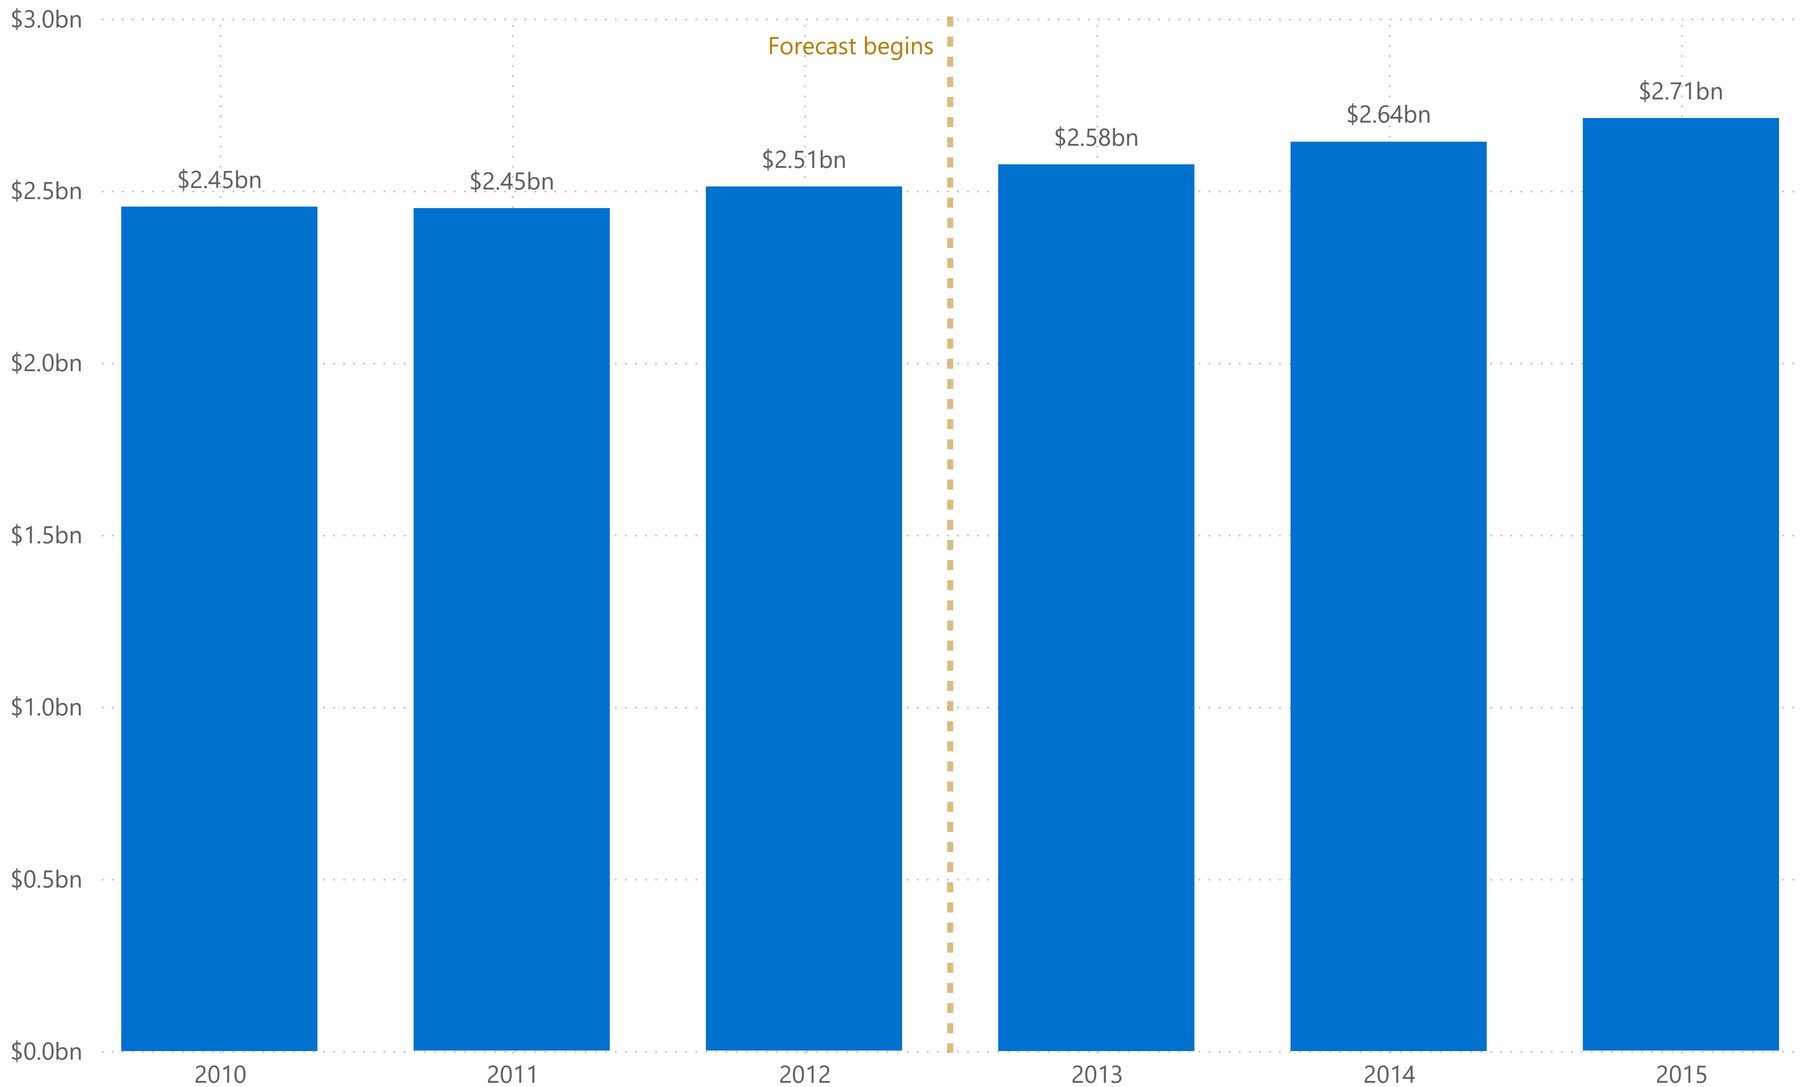
$2.71bn

3-Year Projected Growth

+7.9%

Growth Assumption

+2.6%



Forecast Methodology

1. Base year: 2011 selected as the only complete year (Jan–Dec actuals)
2. Growth rate: +2.6% from 2011→2012 recovery trend as unemployment fell 9%→7%
3. Seasonal pattern: 2011 monthly weights applied to each forecast year
4. Formula: 2011 monthly sales × (1.026)^(Year − 2011)

Analyst's Comments

+2.6% represents the base case. Upside scenario at +4% would project $2.80B by 2015 if employment recovery accelerates. Downside at +1% would project $2.59B if growth normalizes toward the 3-year average.
